Claim 1; SEQ ID NO 736; 205pp; English.

The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease. Sequence 1962 BP; 428 A; 541 C; 473 G; 520 T; 0 U; 0 Other

                                                                                                                                                                                                                                                                                                                                                             The invention relates to human polypeptides, termed NOVX, and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for diagnosing disease, and screening for potential therapeutic agents. The sequences are useful for treating metabolic disorders, cardiomyopathy, diabetes, hypertension, congenital heart defects, aortic stenosis, atrial septal defect (ASD), atrioventricular canal defect, ductus arteriosus, pulmonary stenosis, subaortic stenosis, ventricular septal defect (VSD), valve diseases, tuberous sclerosis, scleroderma, atherosclerosis, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, immune disorders, haemophilia, hypercoagulation, Crohn's disease and cancer. Sequences ABX72170-ABX72275 represent human NOVX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gorman L, Shence Padigaru M, Shi Anderson DW, Le Macdougall JR, Ellerman K;

cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, corporatective, immunosuppressive, haemostatic, antiinflammatory, cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic, and metabolic. Polypeptides and polynucleotides of the invention are useful in the treatment, or as a vaccine in the prevention of, cancer, wound healing disorders, infection, attherosclerosis, Parkinson's disease and Alzheimer's disease, autoimmune disorder, haematopoietic disorder, inflammation, neoplastic diseases, nervous system related disorders and cardiovascular disorders, pancreatitis, respiratory disorder, inflammation, systemic autoimmune disease, hyper-immunity, developmental abnormality, gastrointestinal ulceration, neuropathy, developmental diseases, metrodiseases, sperm dysfunction, thyroid disorders e.g. hypothyroidism, brain damages, colitis, cone phototuralition deficiency, neurological diseases, stroke, angiogenesis, trachea, thymus, lymph node and muscular system, obesity, anorexia, provides and alleviation of precoclous puberty. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. I activity of polypeptides of the invention may be described as, cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, Parkinson's disease, Alzheimer's disease, infection, autoimmune disorde
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 2(a); Page 251-252; 335pp; English.

Human drug metabolizing enzymes, useful in the diagnosis and treatment disorders associated with aberrant (DME) activity, e.g., cancer and autoimmune disorders. of.

Claim 12; SEQ ID NO 20; 142pp; English.

This invention relates to novel drug metabolising enzymes (DME) and the nucleotide sequences which encode them. The invention may be useful for the development of compounds with a cytostatic, immunosuppressive, antiinflammatory, endocrine, ophthalmological, gastrointestinal or hepatotropic activity acting as an agonist or antagonist of drug metabolising enzyme activity. The invention may be used in the diagnosis and treatment of disorders associated with decreased or increased expression or activity of drug metabolising enzymes. Such disorders expression or activity of drug metabolising enzymes. Such disorders include cancer, cell proliferative disorders, autoimmune/inflammatory, endocrine, eye, gastrointestinal (including liver disorders) and metabolic disorders. The present sequence is that of a gene which encodes a human drug metabolising enzyme (DME) of the invention. Note: This sequence did not form part of the printed specification but was obtained in electronic format from EPO.

Novel ca cauxin protein or its salt, useful as or diagnosing cat kidney disease. þ cat kidney disease marker,

Claim 6; SEQ ID NO 3; 33pp; Japanese.

The present sequence encodes a cat cauxin protein (I) or its salt, which is cat kidney disease marker. Also described: (1) a partial peptide (II) of (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) comprising (III); (4) a transformed host (V) comprising (III) or (IV); (5) producing (I) or (II) by culturing (V); (6) a antibody (IV) which couples specifically with (I) or (II); (7) diagnosing cat kidney disease which involves measuring (I) quantitatively, and where reduction of amount of (I) indicates presence of the disease; (8) a cat kidney disease diagnostic agent comprising (I) labelling agent, a reagent which measures the biological activity of urinary (I) or (VI); and (9) a cauxin and the biological activity of urinary (I) or (VI); and (9) a cauxin and the biological activity of urinary (I) or (VI); and (9) a cauxin cat kidney disease marker and (VI) is useful for disgnosing cat kidney disease. (I) enables detection of cat kidney disease simply and correctly. (I) provides an early marker for the disease, and replaces

Also described: (1) a partial peptide (II) CC of (I); (2) a nucleic acid (II) encoding (I) or (II); (3) a vector (IV) comprising (III); (4) a transformed host (V) comprising (III) or (IV); (5) producing (I) or (II) by culturing (V); (6) a antibody (VI) which (CC ouples specifically with (I) or (II); (7) diagnosing cat kidney disease (2 which involves measuring (I) quantitatively, and where reduction of (I) indicates presence of the disease; (8) a cat kidney disease (CC diagnostic agent comprising (I) labelling agent, a reagent which measures (CC diagnostic activity of urinary (I) or (VI); and (9) a cauxin (CC detection kit which measures cauxin in a test sample. (I) suseful as a ccat kidney disease marker and (VI) is useful for diagnosing cat kidney (CC disease. (I) enables detection of cat kidney disease simply and (CC correctly. (I) provides an early marker for the disease, and replaces (CC complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, tyx
                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                     Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, Parkinson's disease, Alzheimer's disease, infection, autoimmune disorder
                                                                                                                                                                                                                                                     19-MAR-2001;
04-APR-2001;
The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. 'activity of polypeptides of the invention may be described as,
                                                                                                                                                                                          (SMIK)
                                                                                                                                                                                                                                                                            06-FEB-2001;
                                                                                                                                                                                                                                                                                                                                                    17-DEC-2001; 2001WO-US049232

                                                             Novel human carboxylesterase-like enzyme polypeptide, regulators of which are useful for preventing and treating organophosphorus intoxication, cancer and osteoporosis.
 The invention relates to a purified human carboxylesterase-like enzyme polypeptide. Carboxylesterase-like enzyme and its DNA are useful for screening for agents which decrease or modulate the activity of carboxylesterase-like enzyme polypeptide. Carboxylesterase-like enzyme

CC disease, such as organophosphorus intoxication, cancer and osteoporosis.
CC compounds that increase the ability of human carboxylesterase-like enzyme
CC compounds that increase the ability of human carboxylesterase-like enzyme
CC control to organophosphorus compounds are useful as detoxifying agents.
CC carboxylesterase-like enzyme agonists and antagonists are useful for
CC treating osteoporosis, Paget's disease and degradation of bone implants,
CC particularly dental implants. Carboxylesterase-like enzyme is useful in
CC diagnostic assays for detecting diseases and abnormalities or
CC susceptibility to disease or abnormalities related to the presence of
CC mutations in the nucleic acid sequences which encode the enzyme. The
CC coding sequence of carboxylesterase-like enzyme polynucleotide is useful
CC in gene therapy and for generating antisense oligonucleotides or
CC carboxylesterase-like enzyme DNA. These antisense oligonucleotides are
CC useful for modulating carboxylesterase-like enzyme gene expression. The
CC useful for modulating carboxylesterase-like enzyme gene expression. The
